I'm new to Xcode and Objective-C. I need my app to access the file system. How do I do this? A: If you want to have a user-selectable file-system directory, you can do this by calling `[NSFileManager defaultManager] containerURLWithDirectory:isDirectory:YES];` Note that this directory doesn't show up as a folder in Xcode, as it's not a real folder. You can, however, drag files and folders into that directory. From the File System Programming Guide: Accessing File System Containers You can retrieve the list of container directories by calling the `containerURLsWithDirectory:` method of the `NSFileManager` class. The first parameter is a URL, and the second parameter is a `BOOL` indicating whether the first parameter is a file URL or a `ld647c40b`

Canadian prime minister Justin Trudeau said Thursday his country will not be a part of an "anti-American coalition" formed to confront Iran's ballistic missile program. Iran has been a key U.S. ally throughout the Bush and Obama administrations, and the U.S. has relied on that support in carrying out its war against the Taliban and Al Qaeda in Afghanistan and Iraq. But several countries, including Britain, Germany and France, are looking to impose sanctions on Iran after its May election saw President Hassan Rouhani win a second term. Rouhani has argued that he will negotiate a nuclear deal with world powers if a tough economic blockade is lifted on the country. "We will not be part of an anti-American coalition formed to confront Iran," Trudeau said in an interview with CBC's Power & Politics, his first as prime minister. "To the contrary, Canada will act as a good neighbour and will continue to work closely with our allies in the region and around the world on the security and stability of the region." Trudeau's comments come as two U.S. lawmakers introduced a bill Thursday that would impose tough sanctions on countries that do business with Iran. U.S. President Barack Obama said in a statement last week that the U.S. would re-engage with Iran. But since the election, the country's foreign minister has urged a "new phase" in U.S.-Iran relations. U.S. Defense Secretary Ash Carter announced in June that Iran would not be allowed to test ballistic missiles capable of carrying nuclear warheads, but a few days later, Tehran carried out its first test launch. Iran said its launch was a response to what it called U.S. "threats and hostility."Comparative effects of epinephrine, norepinephrine, and isoproterenol on coronary circulation, metabolism, and oxygen supply-demand balance in ischemic heart.
